

The Jefferson Psychometric Laboratory, the Institute for Developmental and Health Research Methodology, the Longitudinal Research Institute, and the Department of Psychology at the University of Virginia are happy to announce the inaugural

Millmont Methodology Series

The aim of this monthly lecture series is to provide students and faculty with easily accessible introductions to a variety of data analysis methods and issues. Each lecture would be designed to (1) introduce an analytical technique, (2) discuss the types of theoretical questions the method attempts to answer, (3) illustrate its use via substantive examples, and (4) provide a set of tools (e.g., sample scripts) that would allow new users to begin incorporating the technique in their studies and research programs.

Lectures will be held at the Millmont conference room (Room 120 at 1023 Millmont Street) on either the second or third Wednesday of each month at 4 pm, last approximately an hour, and be followed by a Happy Hour.

2005-2006 Schedule (Preliminary)

September	21	Factor Analysis: An Introduction	Nilam Ram
October	19	Latent Curve Analysis	Kevin Grimm
November	30	Item Response Modeling	Ryan Bowles
January		Cluster Analysis	Denis Gerstorf
February			
March			
April
